

FIBRE CEMENT

Exterior Grade Backer Board

Cladco Fibre Cement Exterior Grade Backer Boards

Cladco Fibre Cement Backer Boards are a multi-use product, and can be fitted under tiling, onto exterior or interior under flooring and more.

Fibre Cement Backer Boards have brilliant water-resistant properties, and so they will last much longer than plaster or ply alternatives. These Boards provide an even surface and can cover uneven walls/floors or moisture-prone areas.

- Suited for damp areas - ideal for tiling onto in bathrooms or under external cladding applications for example
- A1 Fire Rated certification
- Stable and strong - improved load-bearing compared to plaster or ply
- Perfect for use over underfloor heating systems
- Mould and water damage resistant
- Lightweight and easy to work with

Cutting the Boards:

6mm & 9mm Boards: These thinner Boards can be cut with a straight edge and a scoring blade/knife.

12mm & 18mm Boards: Cut the thicker 12mm & 18mm Fibre Cement Boards with a circle saw with a built-in extractor and a suitable filter on a sturdy bench. This will provide a straight, clean line and reduces dust entering the surrounding air.

Please note that due to the nature of the materials, it is recommended that a suitable dust mask and safety gloves are worn when cutting the Boards. Boards are suitable for internal use only.

SPECIFICATIONS	
Board Length	1.2m or 2.4m
Board Width	0.8m or 1.2m
Board Thickness	6mm, 9mm, 12mm, 18mm
Colour	Plain Fibre Cement
Weight per 1.2m Board (approx)	10kg (6mm), 14.80kg (9mm), 18.94kg (12mm), 28.40kg (18mm)
Weight per 2.4m Board (approx)	35.95kg (6mm), 41.20kg (9mm), 59.73kg (12mm), 109.20kg (18mm)
