

2.2M COMPOSITE CORNER TRIM SIGNATURE RANGE

Cladco Signature composite corner trims are an important step in completing your composite decking or cladding installation. Corner trims create a professional finish for your project by hiding exposed edges and sealing corners to prevent insects and debris from entering.

COLOUR RANGE

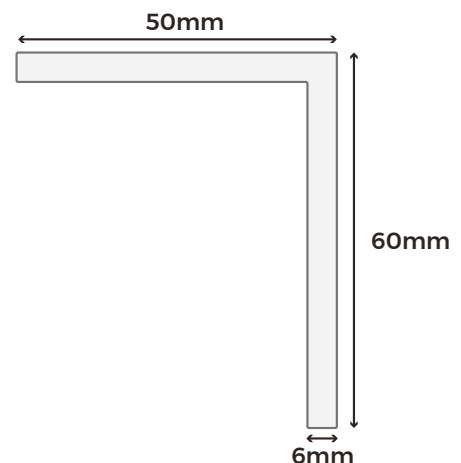

TRIM SPECIFICATIONS

SKU	(Charcoal) WPCCB2255 (Teak) WPCCT2255 (Coffee) WPCCC2255 (Stone Grey) WPCCS2255 (Redwood) WPCCR2255 (Olive Green) WPCCO2255 (Ivory) WPCCI2255 (Light Grey) WPCCL2255
Length	2.2m
Width	60mm x 50mm
Thickness	6mm
Weight	2.1kg

TEST CERTIFICATIONS

FSC® Certification

SA-COC-005542

Please note: Images are for illustration purposes only. Actual products may vary slightly from those shown.

MATERIALS

Composite wood-plastic mix comprising 60% hardwood fibres, 40% recycled plastics.

SURFACE

Featuring a smooth surface for a neat finish to your decking or cladding project.

ACCESSORIES

Signature composite corner trims can be fixed with Cladco adhesive for a strong installation.

LOW MAINTENANCE

Unlike timber, these corner trims do not need to be sealed, stained or varnished.

LONG LASTING

Our Signature composite corner trims are a long lasting addition to your decking or cladding project.

RECYCLED MATERIALS

Cladco Signature composite corner trims are manufactured using 100% recycled materials, reducing our impact on the environment. A mix of 60% recycled hardwood fibres and 40% recycled, post-consumer plastics provides each trim with low-maintenance and long-lasting benefits.

Additional anti-UV agents, colour tints, bonding agents and additives are used to bind the materials to create a durable composite trim.

All Cladco composite products are available as FSC® certified for the same cost. If you require FSC® certified products, please ask for these when placing your order.

AFTERCARE

For standard everyday debris such as plants, leaves, berries and animal droppings, simply clear these away with a brush.

Avoid using grit or sand, as well as metal or plastic spades, on your corner trims as they may scratch the surface.

INSTALLATION ADVICE

Cladding Installation

Corner trims can be cut to size or joined together depending on requirements. Cladco adhesive can then be applied to the trims to secure them to your cladding. You can apply this adhesive to both sides, or just the top edge to allow for expansion.

Decking Installation

Two trims can butt together if required. Cladco adhesive will then need to be used either on both sides or just one (applying to just one side will allow for expansion). Continue with this method until your area is complete.

COLOUR STABILISATION

All Cladco composite products contain UV stabilisers; however, due to their natural elements, all composite products will undergo an initial colour stabilisation process. This may result in some changes in colour during the first few months after installation as the product acclimatises to its environment.

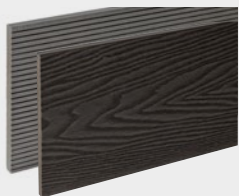

NATURAL WEATHERING

As Cladco composite corner trims contain natural wood elements, they will fade from weathering over time. This process is most noticeable within the first six months after installation.

Please be aware that the appearance of composite trims will change depending on weather conditions and, when wet, boards will display a different tone compared to when they are dry.

For detailed information about installation, please read our Signature composite decking or Signature composite cladding
